RISK INTELLIGENCE / MODEL OBSERVABILITY

# Fraud Detection Command Center .

Transaction intelligence, model benchmarking, cost analysis, temporal drift and feature-risk auditing — connected to your existing project files.

## Model performance explorer

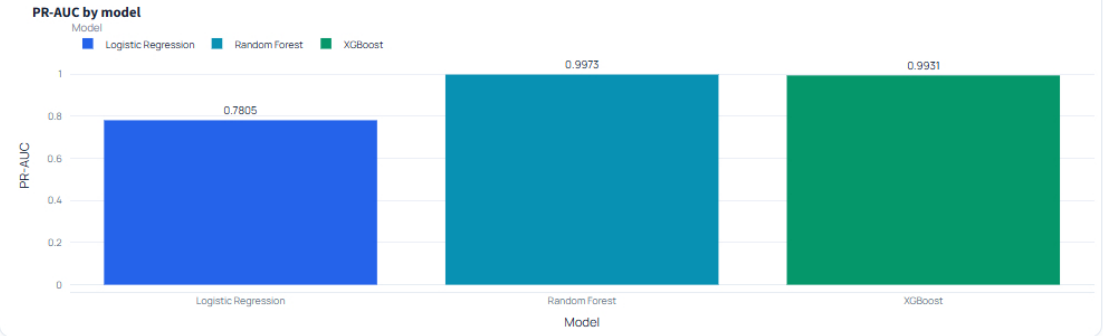

| Model | Threshold | PR-AUC | ROC-AUC | Precision | Recall | F1 | true_negatives | false_positives | false_negatives | true_positives | false_positive_cost_units | missed_fraud_amount_u |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Logistic Regression | 0.65 | 0.7805 | 0.9941 | 0.2333 | 0.9936 | 0.3778 | 84125 | 4089 | 8 | 1244 | 20445 | 11 |
| Random Forest | 0.2 | 0.9973 | 0.9999 | 0.988 | 0.9904 | 0.9892 | 88199 | 15 | 12 | 1240 | 75 | 40014 |
| XGBoost | 0.07 | 0.9931 | 0.9999 | 0.9518 | 0.9936 | 0.9723 | 88151 | 63 | 8 | 1244 | 315 | 39904 |

Models to compare

Logistic Regression × Random Forest × XGBoost ×

Metric

PR-AUC

**How to interpret:** PR-AUC is useful for highly imbalanced fraud data. Precision measures how many flagged transactions are fraud; recall measures how much fraud the model catches. Read them together.
